Add some sparkle to your smile

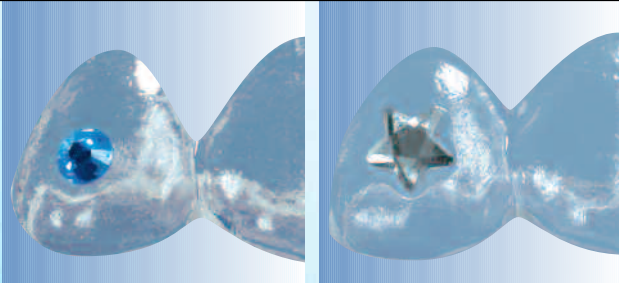

SIMPLY

The manufacturing of the world's latest dental jewel is easier than you can imagine. The stones are placed on a transparent splint made from your own dental imprint. This almost invisible splint covers a part of your upper teeth. After a short period of adaptation, the comfort is optimum. These individual jewels are harmless for your dental enamel and can be placed or removed at any time.

THE BEST

The Jewels-technology appeals because of its high quality, its careful finish and its unusual versatility. Several splints can be manufactured with different stones on the same dental imprint. —
For each occasion, a different jewel. Visually, the Jewels splint is imperceptible. Only the polish stone glitters reflecting the light. - Your individual aura.

WINNING
